iOS Developer working in multicultural teams and large-scale projects. Strong focus on clean code. Experience with Swift (UIKit and SwiftUI), MVVM, CI/CD, modularization, testing, and API integration, with a focus on performance and high-impact deliveries. Mentor of developers, with advanced English communication. Professional with a high agency profile, leading deliveries with autonomy, proposing solutions, and acting across all stages of the software development lifecycle (SDLC). I use AI as a tool to enhance productivity and quality in development.

2019 - 2022 | Higienópolis, SP
Bachelor's Degree in Computer Science  **Presbyterian University Mackenzie**

- Volunteered for 1 year in the MackLeaps laboratory, known as the "Software Factory";
- Developed a technology initiation project focused on documentation and personalized teaching;
- Final Thesis focused on code optimization techniques for performance improvements.

2023 - Present | Interlagos, SP
iOS Software Developer  **F1st (Santander)**

Part of the PJ (MBJ) Security and Customer Support squads in Brazil. Currently in the global PJ team, creating products and developing solutions for the Santander group.

- Mentor: Technical lead responsible for conducting 1:1 follow-ups with iOS developers.
- Code Owner: Responsible for PR reviews and approvals of iOS channel demands.
- Documented the entire onboarding process for iOS developers, recurring technical issues, daily routines, and best practices, making it available to all teams.
- Led initiatives for the Enterprise channel, including the official definition of the Design System, availability of tools for developers, technical adjustments, and resolution of general and legacy technical issues.
- Delivered all demands with architecture solutions designed by me, unit tests (mostly 100%), technical and functional documentation, and adjustments aligned with current technical standards.
- Took ownership of features across the full software development lifecycle (SDLC), from requirements and design to production and maintenance. Led meetings with stakeholders, design, and business teams.
- Participated in incident rooms, handling incidents and critical crashes, including log analysis.
- Worked on projects such as Facial Biometrics, ID Santander, screenshot and screen recording blocking, MFA, Customer Support Home, and integrations with external applications, among other demands.
- Developed new components and technical features in a generic way, promoting reuse across the PJ (iOS) channel and not only within the flows I was directly responsible for.
- Used GitHub Actions, Jenkins, Bitrise, and Fastlane for CI/CD and *versam*.
- Worked with modularization using CocoaPods, Maven, SPM, Xcodegen, and Tuist.
- Worked with architectural patterns such as Clean Swift, MVC, MVVM, Hexagonal, and Clean Architecture.
- Created automation scripts to facilitate daily tasks and machine setup/configuration processes (RPA).

2024 | São Bernardo do Campo, SP
iOS Teacher  **iOS Lab**

Taught iOS development, covering practices in Xcode, Apple guidelines, prototyping, and business workflows. Designed materials on Swift and exercises. Conducted both online and in-person classes for students of different knowledge levels, from beginners to professionals transitioning careers.

2021 - 2022 | Higienópolis, SP
iOS Software Developer  **Apple Developer Academy | Mackenzie**

Focused on building iOS apps as a developer, creating apps using pure Swift (without external frameworks), following Apple HIG standards, totaling 8 apps published on the App Store.

- Git and GitHub version control reference within the academy.
- Held leadership roles in projects, acting as tech lead in the final project.
- Applied Agile methodologies (SCRUM & Kanban).
- Presented apps to Apple employees, investors, and internal stakeholders, in both English and Portuguese.
- Worked with native iOS frameworks and technologies such as MapKit, CoreData, UserDefaults, Contacts, and PhotosUI.
- Built applications using view code and adaptive layout with UIKit, adopting MVC and MVVM architectures.
- Created APIs using Python (Flask) and consumed REST APIs in applications.
- Developed POCs and MVPs for studies and idea validation.
