github.com/Gui25Reis ■ [linkedin.com/in/guilherme-santiago-reis](https://www.linkedin.com/in/guilherme-santiago-reis)

iOS Developer working in multicultural teams and large-scale projects. Strong expertise in clean architecture, code standardization, and CI/CD. Proficient in Swift (mainly UIKit), MVVM, modularization, testing, and API integration, with a focus on performance and high-impact deliveries. Mentor and iOS instructor, with advanced English communication in global teams. Deliveries include technical documentation and scalable, easy-to-maintain solutions.

2019 - 2022 | Higienópolis, SP

Bachelor's Degree in Computer Science Presbyterian University Mackenzie

- Volunteered for 1 year in the MackLeaps laboratory, known as the "Software Factory";
- Developed a technology initiation project focused on documentation and personalized teaching;
- Final Thesis focused on code optimization techniques for performance improvements.

2023 - Present | Interlagos, SP

iOS Developer F1st (Santander)

Part of the PJ (MBJ) Security and Customer Support squads in Brazil. Currently in the global PJ team, creating products and developing solutions for the Santander group.

- Mentor: Led technical follow-ups (1:1) with iOS developers.
- Code Owner: Responsible for PR reviews and approvals of iOS channel demands.
- Documented the entire onboarding process for iOS developers, recurring technical issues, daily routines, and best practices, available for all teams.
- Led initiatives for the PJ channel, including official Design System definitions, tool availability, and technical adjustments for developers.
- Delivered architecture-based solutions with high test coverage (mostly unit tests, 100%), ensuring documentation, functionality, and alignment with established technical standards.
- Attended stakeholder meetings, design and business alignments.
- Supported incident resolution, debugging, and critical crash handling.
- Contributed to Santander's Facial Biometrics, ID Santander, screenshot blocking, MFA, and integrations with external apps, among other demands.
- Developed new reusable components and technical features in the PJ channel, enabling reuse across projects.
- Applied GitHub Actions in CI/CD pipelines and semantic versioning for releases.
- Worked with modularization using CocoaPods, Maven, SPM, Xcodegen, and Tuist.
- Current architecture stack: Clean Swift, MVC, MVVM, Hexagonal Architecture.

2024 | São Bernardo do Campo, SP

iOS Teacher iOS Lab

Taught iOS development, covering practices in Xcode, Apple guidelines, prototyping, and business workflows. Designed materials on Swift and exercises. Conducted both online and in-person classes for students of different knowledge levels, from beginners to professionals transitioning careers.

2021 - 2022 | Higienópolis, SP

iOS Developer Apple Developer Academy | Mackenzie

Focused on building iOS apps as a developer, creating apps using pure Swift (without external frameworks), following Apple HIG standards, totaling 8 apps published on the App Store.

- Git and GitHub version control reference within the academy.
- Held leadership roles in projects, acting as tech lead in the final project.
- Applied Agile methodologies (SCRUM & Kanban).
- Presented apps to Apple employees, investors, and internal stakeholders, in both English and Portuguese.
- Worked with native iOS frameworks and technologies such as MapKit, CoreData, UserDefaults, Contacts, and PhotosUI.
- Built applications using view code and adaptive layout with UIKit, adopting MVC and MVVM architectures.
- Created APIs using Python (Flask) and consumed REST APIs in applications.
- Developed POCs and MVPs for studies and idea validation.
